

## Higher Education Sprout Project Highlights of Academic Year 109

Our school is self-positioned as a "technical institution for cultivating entrepreneurial professionals." On the basis of continuous development, our school implements teaching quality, innovates teaching, strengthens internship and industry-university collaboration, and reduce the gap between learning and using. Besides, we try not only to promote safe schooling programs but also to tutor students study with care. In order to assume the social responsibility of the university(USR), we actively share the resources with the community. Hopefully, we can develop the characteristics of our school--tea culture and its creative program.

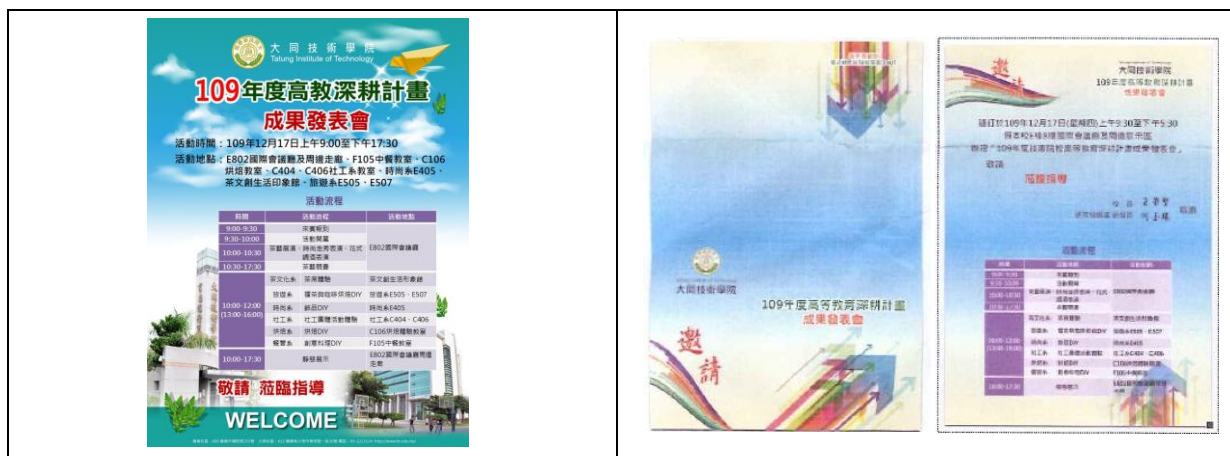

The implementation of Higher Education Sprout Project has been implemented since academic year 107, and the implementation has entered the first year of the second stage. By doing this project, we hope to reach our target results-- "innovate teaching methods in line with social trends and industry needs, arouse students' enthusiasm for learning, enhance their independent learning ability, develop the diverse characteristics of the school and cultivate a new generation of high-quality talents." In order to display the target results we did this year, the 109 Higher Education Sprout Project Results Presentation was presented at our school.

The opening ceremony was held in the international conference hall of our school. The guests all praised the teaching results we presented. The tea art show was performed by the students of Tea Culture Department. The Fashion Catwalk show was presented by students from the Fashion Department. Then, a flair bartender show was performed by students from the Tourism Department. All the performances won unanimous applause

from the guests. Finally, the Tea Art Competition was held, and the participating teams from all over the country came to our school to compete for success.

There were static exhibitions around the International Conference Hall. Area A was a poster exhibition. We displayed the project execution results on board. Area B was a display of the brilliant results of students' learning and teachers' teaching research presented by the six departments. We also arranged dynamical experiencing courses for the guests and vocational students to experience the way we teach in the classroom. The results presentation and entire event ended smoothly after the awards of the Tea Art Competition.
